OBJECTIVE

To obtain a job as a Junior Web Developer at People Search Media.

PROFILE

Having studied Computing Science at Napier University in Edinburgh, Scotland, I have gained experience in a range of web development methods and was awarded with an honors degree in multimedia systems. I am currently in the final stage of a Masters Degree in Applied Informatics. My training in web development not only covers XHTML, CSS, JavaScript, AJAX and PHP, but I also have a strong understanding of current web standards for accessibility and cross browser compatibility. I am very passionate about website layout and structure and I enjoy analyzing the websites of others.

Through my experience at work and University, I have learned to work well in a team and to schedule projects to meet deadlines. In addition, customer oriented classes combined with a background in retail have enhanced my communication and information delivery skills.

For the past two years I have undertaken freelance web projects for small businesses. This has helped me develop my own business management and technical skills. During this time, I have also worked on projects with graphic designers. Through this experience I have learned to combine graphic design and web development to make websites that are professional, usable and visually appealing.

I am enthusiastic about all aspects of web development and I am looking forward to gaining more experience in a web engineering environment.

EDUCATION

MA: Applied Informatics Postgraduate Course at Napier University (Feb 2008 – Present)

BEng. (Honors) in Computing Science: Multimedia Systems at Napier University (2005)

Courses Included (but not limited to):
